

EVERYTHING YOU NEED TO KNOW ABOUT GPS GUARD TOUR TRACKING

Your security officers perform patrols everyday, sometimes 24/7. It's your job as a security provider to reduce risk and liability for you and your customers. That means you need to **ensure your officers are completing patrols** and taking all steps necessary to reduce costly mistakes. Now guard tour tracking with GPS technology can help you do that without ever leaving your office.

HOW DOES IT WORK?

A combination of GPS, Wifi, and cell tower signals determine your officers location and compares this information with the location of your client's site.

*There are two types of GPS tour tracking "labels": **QR Codes** or **NFC Tags**. Your officers simply scan the QR Code or the NFC Tag and the software tracks their location for you. You never have to download a tour tracking wand again!*

WHY USE IT?

You are responsible for ensuring your client's site is secure and that all patrols are completed successfully. To do that, you need to know exactly what your officers are doing on patrol, including checking posts and making tour stops.

*Guard tour tracking with GPS technology gives you an exact GPS location of every tour stop your officer scans, in **real-time**.*

WHAT ARE THE BENEFITS?

Guard tour tracking with GPS technology allows you to monitor your officers remotely and provide documentation of complete patrols in real-time.

- *Real-time, GPS technology helps you **save time** supervising officers and monitoring patrols so you can focus on the big picture.*
- *GPS tracking helps you **reduce liability** for you and your clients by providing records of patrols, including the location, date, time, and officer on patrol for every tour stop scanned.*

Guard tour tracking with GPS technology is the easiest way to know exactly what your officers are doing on patrol. Click [here](#) to learn more about using guard tour tracking for your security company.
